

# C5 Fender Stripe Instruction

. Please check out the "MUST READ" instruction from <http://www.vettestripes.com/instructions/c5-instructions/> since you will install these stripes using wet application

. If you ordering your C5 fender stripes with front and back stripes are the same width, your stripes will look like left picture below.

If you ordering your C5 fender stripes with the back stripes are a bit wider than the front stripes, your stripes will look like the right picture below.

. Those arrows pointing your stripes facing to the engine bay so the other ends will wrap around the fender wells.

. There is actually no exactly OEM placement for these stripes since C5 Corvette did not come with any fender hash marks from factory. These placement will base from my design perspective!

. The front stripes will be the shorter ones and the back stripes will be the longer ones.

. Make sure to clean up your fender wells and the areas next to your hood since your fender stripes will wrap around those areas.

. Install your longer stripe first 11.25" away from the headlight along the line of fender and hood line. Top of the stripe parallel with the fender line and sticking out about 0.25" to bend them inside later.

. Install the shorter piece to your liking position next to the longer stripe also sticking 0.25". Many people put 1/2" apart.

. You may have to trim at the bottom fender well so they are just about 0.25" to bend around the fender well. I make them longer so customers can move them back more than 11.25" if you like that placement better!

. You can also watch YouTube video from my C5 instruction page to get some ideas of wet installation as well. Good luck!!!
